## Late cardiovascular effects of Cancer Therapy (in Childhood)

### Workshop March 3<sup>rd</sup> - 4<sup>th</sup> 2016

Dear members,

therapy of cancer in children is a story of great success, because many patients will survive the disease. So longterm effects of therapy will be of major concern in the future. Our aim is, to bring people together who deal with this problem and to find a consensus between oncologists and cardiologists.

We invited speakers working in this field and are looking forward to an intensive discussion with you.
